ICES Open-Ended Items

What are the major strengths of the instructor/course?

- I really appreciated how the instructor valued hard work and honesty. He would even offer extra credit when he could tell that there was a lot of effort put into an assignment. The professor would often walk through step by step some of the more difficult math which I liked. Furthermore, the R, Latex, and math intros/reviews at the beginning of the semester were great. The only thing that I was not the biggest fan of was how the professor would often say in lecture videos "this is simple" or "this is not that hard." I understand that the professor is much more educated on these topics so to him it might be, but to a student like myself learning them for the very first time, this can be discouraging at times.
- Combined econometric with math using.
- Constant and consistent engagement with the course materials.

What do you suggest to improve the course?

- I would urge the professor to do away with the group work entirely. Group work can be great when courses are taken over 15-16 weeks in a regular semester where the students and professor have the opportunity to meet each other/physically be with one another, but in a fast paced online class it is a disaster. There were so many times this semester where one or more group mates dropped the ball right at the submission due date or simply were entirely uncommunicative. I would have rather done every single homework by myself, knowing that it was my own work which I put ample effort into, than have waited on group members and trusted them to do the right things.
- Give more quiz attempt and not just long question homework.
- Maybe some more frequent grade updates. Not knowing if I was doing the video assignments properly.

Please comment on the grading procedures in the course.

- Please refer to professor's strengths and suggestions to improve the course. These kind of go hand-in-hand. On one side, the professor valued hard work in his grading which I liked. Conversely, group-based homeworks and projects in an online, asynchronous, fast-paced learning environment are a logistical nightmare.
- Partly reasonable.
- Very fair and constructive.

ICES Open-Ended Items

What are the major strengths of the instructor/course?

- There is no other course in the economics undergraduate curriculum that is as in-depth in the theoretical math as this course. As a math double major, I really appreciate this, and it excites me for future graduate level Econ courses. The instructor is very passionate to teach us and is very fair on assignments. Thank you for the course.
- He responded to questions/emails relatively quickly.
- Overall understanding of the structure of modern macroeconomics structure and its mathematical supporting.
- He has a very good math background.
- He is very passionate about his work and teaching. So his major strength is surely passion.
- Being optimistic
- The instructor is passionate about the topic, and he cares about students' learning and understanding of the concepts more than the grades.
- instructor was very passionate clearly and wanted us to do well which I really appreciate.
- The material was very interesting and is very relevant. The instructor was very willing to help us with anything as long as you made the effort. I liked that we really dove into the math behind the numbers so that we could learn about how everything fits together and how it is actually done.
- The instructor is clearly very passionate about the topic, and the course seems very thorough if you specifically want to build macro models for the fed. Other than that the course doesn't seem that helpful.
- Very friendly instructor
- I think the instructor is very kind and tries to make the course fair to all his students, but some things about the class make it difficult.
- No strengths. No feedback on work until after the midterm was finished. Expected great results from the midterm, which were derived from the homework, which he never graded until after. Very disorganized.
- Humberto was very enthusiastic about the topic and I could tell that he had a lot of passion and wanted his students to be just as interested and involved in all of the topics he was explaining.

What do you suggest to improve the course?

- Although the team assignments are easier to complete, I would suggest more individual assignments so we can focus on all of the subjects matter of the topic.
- Almost nobody did the readings (I assume). Emphasize them or remove them. Course lecture was often uninteresting, very math heavy, and it felt like most people were lost. Maybe hold more office hours or edit the content to go over less material, but in more detail.
- The course contains a bit too much material and the context are extremely hard.
- Sometimes, he can get carried away and explain complex topics in a really fast way. He has to understand that we are not his level, and we are students. He can slow down a little bit.
- Maybe grading the assignments as soon as possible instead of leaving the grade blank for one~two month, which it might increase student's anxiety toward this course.
- I think videos on the lecture can be helpful for students that want to go back. Since not every student is willing to ask questions or engage in a public scenario, even when they don't understand the course.
- Reduce the difficulty of exam. Current exam depends too much on memorizing things, such as formula. So formula sheet may be provided.
- Change in teaching style and less just reading off of power points. maybe go over homework questions in class every week to ensure understanding. reading the textbook wasn't helpful because it didn't make sense to me. so much math.
- More involvement of the class during lectures so that everybody follows along, explain things in more simple terms and don't assume students have much background information.
- The course needs to be more engaging and contain more practical and statistical material. The most interesting thing in the course was the Hodrick Prescott filter which was taught in the first week of class. The two week long intro/recap/math review also needs to be dropped. It's simply too boring to dedicate two full weeks to it.
- More interactive activities.
- Grade the homework earlier so we can actually learn the right content. The midterm exam consisted of homework questions to supposedly make it "easier", but we didn't even know if the homework was right so it was kind of useless. Homework due dates never overlapped with office hours which was also difficult. I also think there should be less team homework so people can actually learn stuff.
- I think grading all the assignments on time and being more understanding of the homework are needed to improve the course. The feedback was little to almost never helpful since I did not know what else I needed to include or not.
- n/a

Please comment on the grading procedures in the course.

- The grading procedures are very fair.
- Pretty fair, but woah homework was graded faster.
- Ok
- Grading was pretty fair, I think. I have no comment on his grading procedure.
- Same as above
- Based on collaboration between students to work on homework, attendance, midterm, and final project,
- The grading of homework should be reconsidered. The score range should be bigger.
- grading was very fair
- Grading procedures were fair and I have no suggestions for improvement.
- The instructor needs to grade faster, and be more specific about why he deducts points when he is grading. Simply giving an assignment a 2/3 without explaining why he is giving that grade doesn't help us learn, improve or prepare for exams, especially in a class where most of the exam materials are stripped directly from the homework.
- Very straight-forward
- Nice that there is some leeway but also the grading is very slow.
- Very Harsh. A lot of the material felt as if it was graduate-level work given to undergrad students who were in their first advanced elective. In my opinion, given the entire performance of the class, I believe there should have been a curve along the way.
- The grading procedures were mostly very fair in the class, except he did grade some questions that were very difficult on homeworks that weren't necessarily covered in the textbook or class pretty harshly, and the penalty for late work was probably more than it should have been.
