ICES Open-Ended Items

What are the major strengths of the instructor/course?

- The discussion section covered the scheduled econometric topics, and the T.A. was punctual.
- We managed to cover a lot of useful models in econometrics.
- Very knowledgeable about the subject. Ready to answer any question. Very patient when students are taking a long time to grasp concepts, and great at creating new ways to answer the same question to make things clear. Really cares about students and that is motivating.
- Responsible.
- Humberto is really friendly and approachable! He's also a very dedicated TA. Although I wasn't able to attend his discussions/office hours as frequently this semester, the sessions I did attend were extremely helpful!
- He explains stuffs intuitively
- Humberto's handouts were very helpful
- Humberto is a very nice person. He is always ready for discussion and always motivates the students.
- Humberto had a really cheerful attitude
- Humberto deeply cares about this subject and about students. He is available through email and outside of discussion sections. I strongly recommend Humberto to continue being a TA for this course.

What do you suggest to improve the course?

- Provide supporting materials. No lecture notes, annotated slides, or solution keys were shared, forcing students to rely on incomplete in-class derivations. Offer clear, timely feedback. Problem-set and exam corrections were terse and often lacked explanations, making it difficult to learn from mistakes. Adopt a consistent grading rubric. Point deductions sometimes seemed arbitrary; publishing a rubric in advance would add transparency and fairness. Improve classroom demeanor. A more respectful, approachable attitude.
- I wish we could get more exercises related to the exams throughout the semester.
- More materials. I know some people don't come to the Friday class, but I came to every one. If I could not follow an example - we were moving too quickly, I couldn't understand something on the board, a mistake was made and I got lost ... That was it. I had nothing to reference after class. It would be so much help if you would provide your materials on canvas. Seeing the answers to the fantastic questions you choose from the books somewhere other than live in class on the chalkboard would be a big help. Not sure if the reason for keeping those off canvas was to encourage students to come, but even the students who do attend could use that information. Arguably more, since many of the students coming are also the students struggling.
- NA.
- - It was very frustrating that we were not sent the solutions and notes from the TA sessions. This is the norm in other classes. This made it harder to focus during the sessions because I was busy copying the answers rather than understanding. - The level of difficulty of questions in the TA sessions does not match HW and tests at all. In the TA sessions, we were doing relatively easier problems compared to HW and exams. I did not feel that whatever we do in TA sessions help me solve HWs. - I think the TA could do better in terms of preparation. Sometimes it felt that he is just giving us the answers he has without really explaining how we got it. There were also many algebraic mistakes in the solutions he provided.
- I don't have any specific suggestions for improving the course at this time
- Making things more organized
- The TA can share answers the questions discussed and not discussed in the TA sessions.
- Providing a bit of the explanations discussed in the discussion sessions in the handouts. Some of the handouts were only questions or answer keys.
- Preparation for the discussion sessions and accessibility to the material. The TA discussion sessions weren't helpful in helping ease the course
- NA

Please comment on the grading procedures in the course.

- Grading felt opaque and overly harsh. Scores arrived late, markup was minimal, and identical errors occasionally received different deductions across students. Because expectations were never spelled out, it was hard to understand how to improve.
- Very fair.
- I appreciate very much the time you spend grading and providing feedback. I do think that the strict grading on correctness creates an incentive to copy our use Chat GPT because it will raise grades. Maybe being a little more completion focused would allow students to feel less pressure to be correct, and more able to use homework as practice.
- Clear and detailed.
- I think HW should be graded based on effort and completeness more than the precision of the final answer. This made me demotivated to try some of the questions by myself if I know that I won't get the grade anyway if I do not do it entirely correct.
- Overall, the grading was transparent and reasonable.
- Thank you Humberto!
- Fair
- Fair and impartial
- I think the assignment grading was fair.
- No comment
- Problem sets: 30%, Midterm: 30%, final: 40%.

ICES Open-Ended Items

☐ What are the major strengths of the instructor/course?

- He is knowledgeable, passionate and helpful

- Nice and try to get feedback and improve
- Effort of emailing the students after the TA session on the materials that couldn't be covered due to time constraint, and effort on providing solutions to questions asked via email or in office hours.
- Humberto was an excellent TA for this course and honestly it was motivating to see an upper year student with his level of knowledge, expertise, and enthusiasm teaching this material. It's not easy to work through some of the exercises we did on the spot and he would always do a great job. I also appreciated that he would send follow-up emails if there was a question we didn't get to or a step he needed to double check with the exercise. Prepared & Professional - Humberto took teaching the discussion section very seriously. I would imagine that he spent a significant amount of time each week selecting and working through examples, finding resources, etc. This did not go unnoticed and is really appreciated!!!!
- It was not a good experience.
- Humberto did a great job. His office hours were incredibly helpful. He made the course feel manageable for me. I also sincerely appreciated that his passion for the topic shown through in his teaching.
- review some basic mathematical knowledge.
